Exercise 1

The image displays a Visual Studio IDE with a C# project named 'ISampleDemo'. The code defines a partial class 'Form1' with a 'Form' base class. It includes a 'label1_Click' event handler that checks if a number is even or odd. The code is as follows:

```
1 using static System.Windows.Forms.VisualStyles.VisualStyleElement;
2
3 namespace ISampleDemo
4 {
5     [reference]
6     public partial class Form1 : Form
7     {
8         public Form1()
9         {
10             InitializeComponent();
11         }
12
13         [reference]
14         private void label1_Click(object sender, EventArgs e)
15         {
16         }
17
18         [reference]
19         private void btnCheck_Click(object sender, EventArgs e)
20         {
21             int number = Convert.ToInt32(txtAge.Text);
22             if (number % 2 == 0)
23             {
24                 label2.Text = "EVEN";
25             }
26             else
27             {
28                 label2.Text = "ODD";
29             }
30         }
31
32         [reference]
33         private void label3_Click(object sender, EventArgs e)
34         {
35         }
36
37         [reference]
38         private void Form1_Load(object sender, EventArgs e)
39         {
40         }
41     }
42 }
```

Below the code editor, the 'Form1' application window is shown. It contains a text box labeled 'Enter a Number' with the value '1', a 'Check' button, and a 'Result:' label followed by 'ODD'.

Form1

Enter a Number 2

Check

Result: EVEN

Exercise 2

```
Form1.cs [Design]
PositiveNegativeExercise
1 using System.Reflection.Emit;
2 using static System.Windows.Forms.VisualStyleElement;
3
4 namespace PositiveNegativeExercise
5 {
6     3 references
7     public partial class Form1 : Form
8     {
9         1 reference
10        public Form1()
11        {
12            InitializeComponent();
13        }
14
15        1 reference
16        private void btnCheck_Click(object sender, EventArgs e)
17        {
18            int number = Convert.ToInt32(txtNumber.Text);
19
20            if (number > 0)
21            {
22                lblResult.Text = "POSITIVE";
23            }
24            else if (number < 0)
25            {
26                lblResult.Text = "NEGATIVE";
27            }
28            else
29            {
30                lblResult.Text = "ZERO";
31            }
32        }
33    }
34 }
```
